About SalnetHub

https://www.salnethub.com/about

SalnetHub: Systems that run your business while you grow it.

SalnetHub is an automation and AI company for small-to-medium teams and businesses. We build the connections between your tools so work moves on its own.

Business automation and AI agents for small businesses. We automate lead follow-up, CRM updates, reporting and admin across the tools you already use.

We design and build automations and AI agents across your whole operation: sales, marketing, admin, finance, reporting and customer support. Your tools finally work as one system, and your team gets back to the work that moves the business forward.

Most teams do not need more software. They need the software they have to work together.

A typical small-to-medium business runs on 10 to 30 tools: a CRM, Google Workspace, accounting, a project board, forms, chat. Each one works well on its own. The trouble is the space between them, where people copy data, chase updates and rebuild the same report every week.

That is where SalnetHub works. We map how your work actually happens, then connect your tools so information moves on its own. Where judgment is needed, we add AI that works from your data and keeps a person in control.

Automation is our core. We also build websites and AI assistants, because they work best when they are part of the same connected system.

Our line: Smarter systems. Better decisions. Greater impact.

Founder: Bwire Solomon, Founder of SalnetHub. Solomon has built automations, CRM workflows and AI agents for 53 client projects since 2023, mostly for small teams running on Google Workspace, HubSpot, Zoho, Make, Zapier and n8n.

Track record: 53 client projects since 2023.

Based in: Kampala, Uganda. SalnetHub works with clients worldwide, remotely.

What SalnetHub believes and how we behave

https://www.salnethub.com/about

What SalnetHub believes:

- Your team should spend its time on work that needs a person.
- Automation should use the tools you already pay for.
- Every system we build should be documented and owned by you.
- AI should answer from your data, with a person in control.

How we behave. Four principles shape how SalnetHub writes, builds and supports:

- Plain: We describe your system in the words you already use. If a term needs a definition, we use a simpler one.
- Specific: We name the tools, the steps and the time saved. A number does more work than an adjective.
- Calm: Automations break sometimes. We say what happened, what we did and what happens next, without drama.
- Accountable: We own our work. When something is our mistake, we say so in the first sentence.

Who SalnetHub works with

https://www.salnethub.com/about

SalnetHub works with small-to-medium teams and businesses, usually between 5 and 200 people, that have outgrown doing everything by hand. If your team copies data between tools, we can probably help.

- Service businesses: Agencies, consultancies, accounting and legal practices where client admin eats billable hours.
- E-commerce and retail: Online stores and wholesalers handling orders, stock and customer messages across several tools.
- Property and logistics: Teams coordinating bookings, maintenance, quotes and documents with many moving parts.
- Growing sales teams: Teams of 3 to 50 reps who need leads routed, followed up and reported without extra admin.

Contact

Contact SalnetHub and book a call

https://www.salnethub.com/contact

The best way to start with SalnetHub is a free 20-minute discovery call on Google Meet. Book it at https://www.salnethub.com/contact#book.

What happens:

1. Pick a time that suits you. Times show in your own time zone.
2. We look at your workflow: your tools and process, and the first workflow worth automating.
3. A pilot plan. If it is a fit, you get a clear target, a 14-day pilot and a price based on your own numbers, in writing. No obligation.

Booking details: calls are offered Monday to Friday, 09:00 to 17:00 East Africa Time (EAT, UTC+3), with at least 12 hours' notice and up to 21 days ahead. You get a Google Meet link and a calendar invite by email straight away.

Prefer to write first? Use the contact form at https://www.salnethub.com/contact or email info@salnethub.com. SalnetHub replies within 1 business day.

Services

SalnetHub services at a glance

https://www.salnethub.com/services

SalnetHub offers 9 services in three groups. Automation is what we do most. AI and web projects build on the same foundation: your tools, connected, with clear owners and documentation.

Automation: Connect the tools you already pay for so work moves between them on its own.

- Marketing & CRM automation (Pay from savings): Keep your CRM accurate and your follow-ups on time without anyone updating records by hand. https://www.salnethub.com/services/marketing-crm-automation
- Lead acquisition & qualification (Pay per lead): Capture every lead, score it, and route the good ones to the right person in minutes. https://www.salnethub.com/services/lead-acquisition-qualification
- Data reporting & analytics (Pay from savings): Dashboards that update themselves, so the Monday report is ready before Monday. https://www.salnethub.com/services/data-reporting-analytics
- Business process automation (Pay from savings): Automate approvals, invoicing, onboarding and other processes that cross teams and tools. https://www.salnethub.com/services/business-process-automation
- Task & workflow automation (Pay from savings): Remove the small repetitive tasks that eat your team's day, from data entry to reminders. https://www.salnethub.com/services/task-workflow-automation

AI solutions: Chatbots, agents and knowledge assistants that work from your data, with a human in control.

- AI chatbots for websites (Pay per booking): A website chatbot that answers questions, guides visitors and books calls, trained on your content. https://www.salnethub.com/services/ai-chatbots
- Custom AI agents (Pay from savings): AI agents that do real work in your tools, from email triage to CRM updates, with approval steps. https://www.salnethub.com/services/custom-ai-agents
- RAG knowledge assistants (Pilot first): An AI assistant that answers from your own documents and shows the source for every answer. https://www.salnethub.com/services/rag-systems

Web: Websites that capture leads straight into your CRM and automations.

- Web solutions (Pilot first): Fast, clear websites and landing pages wired straight into your CRM and automations. https://www.salnethub.com/services/web-solutions

Most projects combine two or three of these services. The automation audit ranks every opportunity by hours saved.

Which SalnetHub service fits your problem

https://www.salnethub.com/services

Start with the problem. Pick the sentence that sounds most like your week. That is usually the best first project.

- "Leads wait hours or days for a reply" → Lead acquisition & qualification (Pay per lead). https://www.salnethub.com/services/lead-acquisition-qualification

- "Our CRM is never up to date" → Marketing & CRM automation (Pay from savings). https://www.salnethub.com/services/marketing-crm-automation
- "Reports take a day to put together" → Data reporting & analytics (Pay from savings). https://www.salnethub.com/services/data-reporting-analytics
- "Onboarding and approvals keep stalling" → Business process automation (Pay from savings). https://www.salnethub.com/services/business-process-automation
- "The team spends hours copying data" → Task & workflow automation (Pay from savings). https://www.salnethub.com/services/task-workflow-automation
- "Visitors leave without asking anything" → AI chatbots for websites (Pay per booking). https://www.salnethub.com/services/ai-chatbots
- "Someone reads and routes every request" → Custom AI agents (Pay from savings). https://www.salnethub.com/services/custom-ai-agents
- "Nobody can find the right document" → RAG knowledge assistants (Pilot first). https://www.salnethub.com/services/rag-systems
- "Our website does not bring in leads" → Web solutions (Pilot first). https://www.salnethub.com/services/web-solutions

By outcome:

- Sales & leads: Every lead answered in minutes, every deal in the CRM. Capture leads from ads, forms and chat, score them, route them to the right person and reply before a competitor does. Services: Lead acquisition & qualification, Marketing & CRM automation.

- Reporting: Reports that build themselves. Live dashboards and a Monday report that is ready before Monday. Services: Data reporting & analytics.

- Operations & admin: Admin that runs on its own. Approvals, invoicing, onboarding and the small daily tasks that cross teams and tools. Services: Business process automation, Task & workflow automation.

- AI agents & chatbots: AI that works from your data, with a person in control. Chatbots, agents and knowledge assistants that answer from your own content and hand over to your team when it matters. Services: AI chatbots for websites, Custom AI agents, RAG knowledge assistants.

- Websites: Websites that feed your pipeline. Fast, clear websites and landing pages wired straight into your CRM and automations, so every enquiry starts a workflow. Services: Web solutions.

Not sure which one you need? Book a free call or start with the automation audit.

Service

Marketing & CRM automation: overview and price

https://www.salnethub.com/services/marketing-crm-automation

SalnetHub service: Marketing & CRM automation (Automation).

Keep your CRM accurate and your follow-ups on time without anyone updating records by hand.

A CRM that updates itself. We connect your forms, inbox, ads and CRM so every contact, deal and follow-up is recorded the moment it happens.

Where CRM work usually breaks:

- Records go stale: Sales reps update the CRM at the end of the week, if at all. Reports are only as good as the last manual entry.
- Follow-ups slip: A lead fills in a form on Friday evening and hears back on Tuesday. By then they have spoken to two competitors.
- Marketing and sales disagree: Campaign data sits in one tool and deal data in another, so nobody can say which channel brings paying customers.

Example: inbound enquiries for a 12-person services firm

Before: Enquiries landed in a shared inbox. Someone copied them into HubSpot twice a day and replies took 6 to 24 hours.

After: Every enquiry creates a HubSpot contact and deal, gets a personal reply within 2 minutes and a task for the right rep.

How you pay for Marketing & CRM automation: Pay from savings. Priced on time saved: your monthly fee is never more than 25% of what the work costs you today. Starts with a $250 pilot, refunded if it misses its target.

Every project gets a fixed written quote before work starts.

Marketing & CRM automation: what is included and how it is delivered

https://www.salnethub.com/services/marketing-crm-automation

What SalnetHub's Marketing & CRM automation service includes:

- Contact sync: Form fills, calls, emails and purchases create or update the right CRM record with no duplicates.
- Follow-up sequences: Personal emails and tasks go out on a schedule you set, and stop as soon as the lead replies.
- Deal stage automation: Deals move stage when something real happens: a quote is opened, a contract is signed, an invoice is paid.
- Lifecycle tagging: Contacts are tagged by source, interest and stage so campaigns reach the right people.
- Campaign attribution: UTM and ad data are stored on the contact, so revenue can be traced back to the channel that earned it.
- Clean-up jobs: Scheduled checks merge duplicates, fix formatting and flag records with missing owners.

From first touch to closed deal: Each step runs on its own. Your team only steps in for the conversations that need a person.

Steps: Web form (New enquiry) → CRM record (Created, deduplicated) → Follow-up email (Sent in 2 minutes) → Sales task (Assigned to owner) → Deal updated (Stage moves on reply)

Deliverables:

- A map of your current contact and deal flow, with the gaps marked
- Working automations in your CRM and connected tools
- Field and pipeline clean-up so the data stays usable
- A written handover guide and a recorded walkthrough
- 30 days of monitoring and fixes after launch

Timeline:

- Map (Week 1): We review your CRM, forms and inbox and agree which flows to automate first.
- Build (Weeks 2 to 3): We build in a test copy of your setup so nothing touches live data until it works.
- Test (Week 3): We run real examples end to end with your team and fix what they find.
- Launch (Week 4): We switch it on, watch the first days closely and hand over the documentation.

Tools we typically use for Marketing & CRM automation: HubSpot, Zoho, Gmail, Google Sheets, Typeform, Mailchimp, Make, Zapier.

Lead acquisition & qualification: overview and price

https://www.salnethub.com/services/lead-acquisition-qualification

SalnetHub service: Lead acquisition & qualification (Automation).

Capture every lead, score it, and route the good ones to the right person in minutes.

Every lead captured, scored and routed. Leads from forms, ads and chat are enriched, scored against your criteria and sent to the right rep before they go cold.

Why good leads get lost:

- Too many sources: Website forms, Facebook lead ads, LinkedIn, referrals and chat all land in different places.
- No clear priority: Reps treat a student enquiry and a 200-seat buyer the same way, so the best leads wait in line.
- Slow first response: Most buyers choose the company that replies first. A reply the next day is often too late.

Example: lead ads for a home-services company

Before: Facebook leads were downloaded as a spreadsheet each morning and split between 4 reps by hand.

After: Each lead is scored and texted to the rep covering that area within 90 seconds, with a booking link sent to the customer.

How you pay for Lead acquisition & qualification: Pay per lead. Paid per qualified lead we deliver. No setup fee, nothing up front. Starts with a free 14-day pilot.

Every project gets a fixed written quote before work starts.

Lead acquisition & qualification: what is included and how it is delivered

https://www.salnethub.com/services/lead-acquisition-qualification

What SalnetHub's Lead acquisition & qualification service includes:

- Lead capture: Forms, ad platforms, chat and email feed into one pipeline with the source recorded.
- Enrichment: Company size, industry and location are added from public data so reps know who they are talking to.
- Scoring: Each lead is scored against rules you agree with us, such as budget, team size or service requested.
- Routing: Leads go to the right rep by territory, product or round robin, with a backup if nobody picks them up.
- Instant replies: A personal first reply and a booking link go out within 2 minutes, day or night.
- Disqualification: Poor-fit leads get a polite automated reply and stay out of your reps' queue.

From click to qualified conversation: A strong lead reaches a rep's phone in minutes. A weak one never takes up their time.

Steps: Lead captured (Form, ad or chat) → Enriched (Company data added) → Scored (Against your rules) → Routed (Right rep, instantly) → Call booked (Calendar link sent)

Deliverables:

- A lead scoring model written down and agreed with your sales lead
- Connected capture from every lead source you use
- Routing rules, reply templates and booking links
- A live view of lead volume, speed to reply and conversion
- Handover guide and 30 days of monitoring

Timeline:

- Map (Week 1): We list every lead source and agree what makes a lead worth a call.
- Build (Weeks 2 to 3): We connect the sources, scoring, routing and replies in a test setup.
- Test (Week 3): We push sample leads through every path, including the edge cases.
- Launch (Week 4): We go live and tune the scoring after the first 2 weeks of real leads.

Tools we typically use for Lead acquisition & qualification: Typeform, Google Forms, Meta lead ads, HubSpot, Google Sheets, Calendly, WhatsApp, Make.

Data reporting & analytics: overview and price

https://www.salnethub.com/services/data-reporting-analytics

SalnetHub service: Data reporting & analytics (Automation).

Dashboards that update themselves, so the Monday report is ready before Monday.

Reports that build themselves. We pull data from your CRM, finance and operations tools into live dashboards and scheduled reports your team can trust.

What manual reporting costs you:

- Hours of copy and paste: Someone exports 5 spreadsheets every week and stitches them together before the meeting.

- Numbers nobody trusts: Different teams report different totals because each one pulls data a different way.
- Decisions on old data: By the time the monthly report is ready, the month it describes is long gone.

Example: weekly sales report for an online retailer

Before: The operations lead spent most of Monday morning exporting Shopify, ad and Sheets data into a slide deck.

After: A Looker Studio dashboard refreshes every hour, and a summary email reaches the leadership team at 8 am each Monday.

How you pay for Data reporting & analytics: Pay from savings. Priced on time saved: your monthly fee is never more than 25% of what the work costs you today. Starts with a $250 pilot, refunded if it misses its target.

Every project gets a fixed written quote before work starts.

Data reporting & analytics: what is included and how it is delivered

https://www.salnethub.com/services/data-reporting-analytics

What SalnetHub's Data reporting & analytics service includes:

- Data pipelines: Scheduled syncs pull from your CRM, accounting, ads, store and spreadsheets into one place.
- Live dashboards: Looker Studio or Google Sheets dashboards that refresh on their own, built around the questions you ask.
- Scheduled reports: A PDF or email summary goes to the right people every Monday at 8 am, or whenever you choose.
- KPI definitions: We write down how each number is calculated so every team reports the same total.
- Alerts: Get a message when a number crosses a line: cash below a threshold, leads down 30%, stock running low.
- Data clean-up: Duplicates, mismatched names and broken formats are fixed before they reach a chart.

From scattered exports to one source of truth: Data is collected, cleaned and charted on a schedule. Nobody has to open an export again.

Steps: CRM (Deals, contacts) → Accounting (Invoices, cash) → Store and ads (Orders, spend) → Clean and join (Every 15 minutes) → Dashboard (Live for the team)

Deliverables:

- A short list of the KPIs that matter, with written definitions
- Automated data pipelines from each source
- Dashboards and scheduled reports for each audience
- Threshold alerts for the numbers you want watched
- Handover guide and 30 days of monitoring

Timeline:

- Define (Week 1): We agree on the questions the dashboard must answer and how each number is calculated.

- Connect (Weeks 2 to 3): We build the data pipelines and check every total against your current reports.
- Design (Week 3): We lay out the dashboards so the most important number is the first thing you see.
- Launch (Week 4): We schedule the reports, set the alerts and walk your team through it.

Tools we typically use for Data reporting & analytics: Google Sheets, Looker Studio, Google Analytics, HubSpot, QuickBooks, Xero, Shopify, Apps Script.

Business process automation: overview and price

https://www.salnethub.com/services/business-process-automation

SalnetHub service: Business process automation (Automation).

Automate approvals, invoicing, onboarding and other processes that cross teams and tools.

Processes that run end to end. We automate the multi-step processes that cross teams, like client onboarding, approvals and invoicing, with clear owners at every step.

Where cross-team processes stall:

- Work waits in inboxes: An approval sits in a manager's email for 3 days because nobody knew it was waiting.
- The same data typed 4 times: A new client's details are entered into the CRM, the invoicing tool, the project board and a spreadsheet.
- Steps depend on one person: When the person who knows the process is on leave, the process stops.

Example: client onboarding for an accounting practice

Before: Each new client took about 2 hours of admin across 5 tools, and steps were often missed.

After: A signed engagement letter triggers every setup step in under 5 minutes, with a checklist the partner can review.

How you pay for Business process automation: Pay from savings. Priced on time saved: your monthly fee is never more than 25% of what the work costs you today. Starts with a $250 pilot, refunded if it misses its target.

Every project gets a fixed written quote before work starts.

Business process automation: what is included and how it is delivered

https://www.salnethub.com/services/business-process-automation

What SalnetHub's Business process automation service includes:

- Client onboarding: A signed contract creates the client folder, project board, invoice schedule and welcome email.
- Approvals: Requests go to the right approver with one-click approve or reject, plus reminders and escalation.
- Invoicing and payments: Invoices are created from completed work and payment reminders go out on schedule.
- Document generation: Quotes, contracts and reports are filled from your data in Google Docs and saved to the right folder.

- Employee onboarding: Accounts, equipment requests, training tasks and first-week emails are triggered from one form.
- Audit trail: Every step is logged with who did what and when, in a sheet your team can search.

From signed contract to kickoff call: One trigger starts every step. People only act where a decision is needed.

Steps: Contract signed (Trigger) → Client folder (Drive, templates) → Invoice schedule (In accounting) → Manager approval (One click) → Kickoff booked (Welcome email)

Deliverables:

- A process map showing every step, owner and tool
- Automations with approval steps where people need to decide
- Document templates connected to your data
- An audit log of every run
- Handover guide and 30 days of monitoring

Timeline:

- Map (Week 1): We walk through the process with the people who do it today and find where time is lost.
- Build (Weeks 2 to 4): We automate the steps in order, with approval points wherever a person must decide.
- Test (Week 4): We run real cases through the process and adjust it with your team.
- Launch (Weeks 5 to 6): We switch over in stages so nothing breaks during the change.

Tools we typically use for Business process automation: Google Drive, Gmail, Google Sheets, Apps Script, QuickBooks, ClickUp, Asana, n8n.

Task & workflow automation: overview and price

https://www.salnethub.com/services/task-workflow-automation

SalnetHub service: Task & workflow automation (Automation).

Remove the small repetitive tasks that eat your team's day, from data entry to reminders.

Win back hours every week. Data entry, reminders, file moves and status updates quietly eat your team's day. We automate them so your people can do the work they were hired for.

Small tasks, big cost:

- Death by copy and paste: Moving order details from email into a spreadsheet takes 3 minutes. Forty times a day, that is 2 hours.
- Reminders that rely on memory: Renewals, follow-ups and deadlines are tracked in someone's head or a sticky note.
- Constant status questions: People ask where things are because there is no automatic update when something changes.

Example: order handling for a wholesale supplier

Before: A coordinator copied about 40 orders a day from email into a spreadsheet and replied to each customer by hand.

After: Orders are added to Google Sheets as they arrive and customers get a confirmation automatically. That is about 6 hours a week back.

How you pay for Task & workflow automation: Pay from savings. Priced on time saved: your monthly fee is never more than 25% of what the work costs you today. Starts with a $250 pilot, refunded if it misses its target.

Every project gets a fixed written quote before work starts.

Task & workflow automation: what is included and how it is delivered

https://www.salnethub.com/services/task-workflow-automation

What SalnetHub's Task & workflow automation service includes:

- Email to spreadsheet: Orders, receipts and requests in your inbox are read and added to Google Sheets as clean rows.
- Scheduled reminders: Renewals, deadlines and follow-ups trigger reminders to the right person at the right time.
- File handling: Attachments are renamed, filed into the right Drive folder and shared with the right people.
- Status updates: Customers and teammates get an automatic message when an order, ticket or task changes stage.
- Form processing: Form submissions become tasks, records and notifications without anyone retyping them.
- Apps Script tools: Custom buttons and menus inside Google Sheets and Docs for the jobs no off-the-shelf tool covers.

From inbox to done: Repetitive steps happen in seconds. Your team sees the result, not the busywork.

Steps: Order email (Arrives in Gmail) → Details read (Parsed automatically) → Sheet updated (New row added) → Team notified (Task created) → Customer updated (Status email sent)

Deliverables:

- A list of tasks ranked by hours saved per week
- Working automations for the top tasks
- Error alerts so you know if anything stops
- Handover guide and a recorded walkthrough
- 30 days of monitoring and fixes

Timeline:

- List (Days 1 to 2): We list the repetitive tasks and estimate the time each one costs.
- Build (Week 1): We automate the tasks with the biggest time savings first.
- Test (Week 2): We run the automations on real data alongside your team.
- Launch (Week 2): We switch them on and set up alerts in case anything fails.

Tools we typically use for Task & workflow automation: Gmail, Google Sheets, Google Drive, Apps Script, Google Calendar, Trello, Zapier, Make.

AI chatbots for websites: overview and price

https://www.salnethub.com/services/ai-chatbots

SalnetHub service: AI chatbots for websites (AI solutions).

A website chatbot that answers questions, guides visitors and books calls, trained on your content.

A website chatbot that knows your business. It answers visitor questions from your own content, points people to the right page, qualifies leads and books calls. A person takes over when needed.

Why visitors leave without a word:

- Questions go unanswered: Visitors have one question about price, timing or fit. If they cannot find the answer in 30 seconds, they leave.
- Forms feel like work: A contact form with 8 fields gets skipped. A conversation gets answered.
- After-hours traffic is wasted: Half your visits happen outside office hours, when nobody is there to reply.

Example: a chatbot for a training provider

Before: Most enquiries asked the same 10 questions about dates, prices and certificates, answered by email the next day.

After: The chatbot answers them instantly from the course catalogue and books a call when a company asks about group training.

How you pay for AI chatbots for websites: Pay per booking. Paid per booked appointment or qualified lead. No setup fee, nothing up front. Starts with a free 14-day pilot.

Every project gets a fixed written quote before work starts.

AI chatbots for websites: what is included and how it is delivered

https://www.salnethub.com/services/ai-chatbots

What SalnetHub's AI chatbots for websites service includes:

- Trained on your content: The chatbot answers from your website, FAQs, price lists and documents, not from guesswork.
- Visitor guidance: It recommends the right service or page based on what the visitor asks.
- Lead qualification: It asks the questions your sales team would ask and saves the answers to your CRM.
- Call booking: Qualified visitors can book a meeting in your calendar without leaving the chat.
- Human handoff: When a question needs a person, the chat goes to your team by email, WhatsApp or live chat, with the full history.
- Conversation review: You can read every conversation and see the most common questions, so you know what to add to your site.

From question to booked call: Try the demo. Every answer comes from the business's own content, and each lead lands in the CRM.

Steps: Visitor asks (On any page) → Answer found (From your content) → Lead qualified (Key questions asked) → Saved to CRM (With full transcript) → Call booked (In your calendar)

Deliverables:

- A chatbot trained on your approved content
- Conversation flows for qualification and booking
- CRM and calendar connections

- Human handoff to your team's channel
- A dashboard of conversations and common questions

Timeline:

- Gather (Week 1): We collect your content, agree on what the chatbot may and may not answer, and write its tone guide.
- Build (Weeks 2 to 3): We set up the knowledge base, conversation flows, CRM and calendar connections.
- Test (Week 3): We test with 100+ real questions, including tricky ones, and fix every weak answer.
- Launch (Week 4): We add it to your site and review conversations weekly for the first month.

Safeguards:

- Answers from approved content only: The chatbot is limited to your material. If it does not know, it says so and offers a person.
- No invented prices or promises: Sensitive topics like pricing, refunds and contracts follow fixed rules you approve.
- Data privacy: Conversations are stored in your own accounts. We do not use your data to train public models.
- Clear AI disclosure: Visitors are told they are talking to an AI assistant and can ask for a person at any time.

Tools we typically use for AI chatbots for websites: OpenAI, Anthropic, HubSpot, Calendly, WhatsApp, WordPress, Webflow, Make.

Custom AI agents: overview and price

https://www.salnethub.com/services/custom-ai-agents

SalnetHub service: Custom AI agents (AI solutions).

AI agents that do real work in your tools, from email triage to CRM updates, with approval steps.

AI agents that do the work, with you in control. An agent reads, decides and acts across your tools: it sorts email, updates records and drafts replies, then waits for approval where it matters.

Work that rules alone cannot handle:

- Every message is different: Simple automations need fixed rules. Real emails, requests and documents rarely follow them.
- Judgment calls pile up: Someone has to read each request, decide what it is and route it, dozens of times a day.
- Busy people do low-value reading: Senior staff spend hours reading and summarising before they can make a decision.

Example: quote requests for a logistics firm

Before: A coordinator read each quote request, checked rates in a spreadsheet and typed a reply. Each one took about 20 minutes.

After: An agent reads the request, checks the rate sheet and drafts the quote. The coordinator reviews and sends it in under 2 minutes.

How you pay for Custom AI agents: Pay from savings. Priced on time saved: your monthly fee is never more than 25% of what the work costs you today. Starts with a $250 pilot, refunded if it misses its target.

Every project gets a fixed written quote before work starts.

Custom AI agents: what is included and how it is delivered

https://www.salnethub.com/services/custom-ai-agents

What SalnetHub's Custom AI agents service includes:

- Email and inbox triage: The agent reads incoming email, labels it, drafts a reply and routes anything urgent to a person.
- CRM and record updates: It pulls details from emails, calls and documents and updates the right records.
- Document processing: Invoices, contracts and forms are read, checked and turned into structured data.
- Research and preparation: Before a sales call, it gathers the company background and history and writes a short brief.
- Multi-step tasks: It works through a task across several tools, such as checking stock, drafting a quote and logging it.
- Approval checkpoints: Any action that sends, pays or deletes waits for a person to approve it.

How an agent handles a request: The agent prepares everything. A person approves before anything leaves the building.

Steps: Request arrives (Email or form) → Agent reads (Understands intent) → Gathers data (CRM, Sheets, Drive) → Needs approval (Person reviews) → Action done (Logged and sent)

Deliverables:

- A written scope of what the agent may and may not do
- The working agent connected to your tools
- Approval steps for every sensitive action
- A log of every decision and action the agent takes
- Handover guide and 30 days of monitoring

Timeline:

- Scope (Week 1): We pick one job, define the agent's permissions and agree where approvals are required.
- Build (Weeks 2 to 4): We build the agent, connect its tools and test it on your past examples.
- Shadow (Week 5): The agent runs alongside your team, suggesting actions without taking them.
- Launch (Week 6): We turn on approved actions step by step and review its work weekly.

Safeguards:

- Least access: The agent only gets the permissions its job needs. It cannot reach anything else.
- Human approval: Sending, paying, deleting and other sensitive actions always wait for a person.
- Full activity log: Every decision is recorded with its reasoning, so you can check exactly what happened.
- Shadow mode first: The agent proves itself on suggestions before it is allowed to act.

Tools we typically use for Custom AI agents: OpenAI, Anthropic, Gmail, Google Sheets, HubSpot, n8n, Make, Supabase.

RAG knowledge assistants: overview and price

https://www.salnethub.com/services/rag-systems

SalnetHub service: RAG knowledge assistants (AI solutions).

An AI assistant that answers from your own documents and shows the source for every answer.

Answers from your documents, with sources. A knowledge assistant that searches your SOPs, contracts and help articles first, then answers with a link to the exact source.

When knowledge is hard to find:

- Answers live in 500 files: The answer exists somewhere in Drive, Notion or an old PDF. Finding it takes 20 minutes.
- The same questions every day: New staff ask senior staff the same questions, pulling them away from their own work.
- General AI makes things up: Public chatbots do not know your policies and will confidently guess when they are unsure.

Example: an internal assistant for a property manager

Before: Staff searched 300+ Drive documents or asked the operations manager about lease terms and maintenance procedures.

After: Staff ask the assistant in plain words and get the answer with a link to the exact clause or procedure.

How you pay for RAG knowledge assistants: Pilot first. Starts with a $250 pilot, refunded if it misses its target. Then a fixed quote or a monthly fee, whichever suits you.

Every project gets a fixed written quote before work starts.

RAG knowledge assistants: what is included and how it is delivered

https://www.salnethub.com/services/rag-systems

What SalnetHub's RAG knowledge assistants service includes:

- Document library: We connect your Google Drive, Notion, PDFs, help centre and website as the assistant's source material.
- Cited answers: Every answer links to the document and section it came from, so anyone can check it.
- Internal help desk: Staff ask questions about policies, processes and products and get answers in seconds.
- Customer support: Customers get accurate answers from your help articles, with handoff to your team when needed.
- Access control: People only get answers from the documents they are allowed to see.
- Automatic updates: When a document changes, the assistant's knowledge updates on the next sync.

How retrieval-augmented generation works: It looks up your documents first, then answers. That is what stops it from guessing.

Steps: Question (Asked in plain words) → Search library (Your documents only) → Best passages (Ranked by relevance) → Answer written (From those passages) → Sources shown (Linked for checking)

Deliverables:

- A connected and cleaned document library
- The assistant, in Slack-style chat, on your site or as an internal web app
- Source citations on every answer
- Access rules matched to your team structure
- An accuracy test set and report

Timeline:

- Collect (Week 1): We gather the documents, remove outdated ones and agree who can see what.
- Index (Weeks 2 to 3): We split, label and index the documents so the right passages are found.
- Evaluate (Week 4): We test against a set of real questions with known answers and measure accuracy.
- Launch (Weeks 5 to 6): We roll it out to a pilot group first, then to everyone.

Safeguards:

- Grounded answers: The assistant only answers from retrieved passages. If nothing relevant is found, it says so.
- Sources on every answer: Each answer links to its source, so people can check rather than trust blindly.
- Permission-aware: Search respects your access rules. Confidential files stay confidential.
- Measured accuracy: We test against real questions before launch and share the results with you.

Tools we typically use for RAG knowledge assistants: OpenAI, Anthropic, Google Drive, Notion, Supabase, LangChain, Intercom, n8n.

Web solutions: overview and price

https://www.salnethub.com/services/web-solutions

SalnetHub service: Web solutions (Web).

Fast, clear websites and landing pages wired straight into your CRM and automations.

Websites that feed your pipeline. We design and build fast websites and landing pages where every form, booking and chat goes straight into your CRM and automations.

Why many business websites underperform:

- Pretty but disconnected: Form submissions go to an inbox nobody checks, so leads are lost after the click.
- Slow and hard to update: Pages take 6 seconds to load, and every text change needs a developer.
- No clear next step: Visitors cannot tell what you offer or what to do next, so they leave.

Example: a services website rebuild

Before: A slow template site sent form submissions to a personal inbox and could only be edited by the original developer.

After: A fast site with an easy editor, where every enquiry creates a CRM deal and gets an instant personal reply.

How you pay for Web solutions: Pilot first. Starts with a $250 pilot, refunded if it misses its target. Then a fixed quote or a monthly fee, whichever suits you.

Every project gets a fixed written quote before work starts.

Web solutions: what is included and how it is delivered

https://www.salnethub.com/services/web-solutions

What SalnetHub's Web solutions service includes:

- Clear page structure: Pages lead with what the visitor gets, show how it works, then make the next step obvious.
- Connected forms: Every form, booking and chat creates a CRM record and starts your follow-up automation.
- Fast by default: Modern builds that load in under 2 seconds and score well on Google's speed tests.
- Easy editing: A simple editor so your team can change text, add case studies and publish pages.
- SEO foundations: Clean structure, metadata, sitemaps and schema so search engines understand your pages.
- Analytics and tracking: Conversion tracking set up properly, so you know which pages and channels bring leads.

From visit to CRM record: The website is the start of your pipeline, not a separate island.

Steps: Visitor lands (Fast page load) → Clear offer (Next step obvious) → Form or chat (Low friction) → CRM record (Created instantly) → Follow-up (Automation starts)

Deliverables:

- Sitemap, page copy structure and wireframes
- A responsive design in your brand
- The built website with an easy content editor
- Forms and booking connected to your CRM
- Speed, SEO and analytics setup

Timeline:

- Plan (Week 1): We agree the sitemap, the message for each page and how leads should flow.
- Design (Weeks 2 to 3): We design the key pages and refine them with you.
- Build (Weeks 3 to 5): We build the site, connect the forms and set up the editor.
- Launch (Week 6): We test on real devices, launch and track the first month of results.

Tools we typically use for Web solutions: Next.js, Webflow, WordPress, Shopify, Vercel, HubSpot, Google Analytics, Calendly.

FAQ

Marketing & CRM automation FAQ: Which CRMs do you work with?

https://www.salnethub.com/services/marketing-crm-automation

Question about SalnetHub's Marketing & CRM automation service: Which CRMs do you work with?

Answer: Mostly HubSpot, Zoho and Google Sheets based CRMs. If your CRM has an API, we can usually connect it. We confirm this on the first call.

Marketing & CRM automation FAQ: Will this replace my sales team's work?

https://www.salnethub.com/services/marketing-crm-automation

Question about SalnetHub's Marketing & CRM automation service: Will this replace my sales team's work?

Answer: No. It removes the copying, chasing and data entry so your team spends their time on conversations.

Marketing & CRM automation FAQ: What happens to our existing data?

https://www.salnethub.com/services/marketing-crm-automation

Question about SalnetHub's Marketing & CRM automation service: What happens to our existing data?

Answer: We clean it before we automate on top of it. Nothing is deleted without your approval, and we keep a backup.

Marketing & CRM automation FAQ: Do we need to buy new software?

https://www.salnethub.com/services/marketing-crm-automation

Question about SalnetHub's Marketing & CRM automation service: Do we need to buy new software?

Answer: Usually not. We build on the tools you already pay for, plus a connector like Make or Zapier if one is needed.

Lead acquisition & qualification FAQ: Can you work with our ad accounts?

https://www.salnethub.com/services/lead-acquisition-qualification

Question about SalnetHub's Lead acquisition & qualification service: Can you work with our ad accounts?

Answer: Yes. We connect Facebook and Instagram lead ads, Google Ads lead forms and most form tools through their official integrations.

Lead acquisition & qualification FAQ: Who decides the scoring rules?

https://www.salnethub.com/services/lead-acquisition-qualification

Question about SalnetHub's Lead acquisition & qualification service: Who decides the scoring rules?

Answer: You do. We propose a starting model from your past deals and adjust it with your sales lead.

Lead acquisition & qualification FAQ: Can leads go to WhatsApp or SMS?

https://www.salnethub.com/services/lead-acquisition-qualification

Question about SalnetHub's Lead acquisition & qualification service: Can leads go to WhatsApp or SMS?

Answer: Yes. Reps can be alerted by email, Slack-style chat, WhatsApp or SMS, depending on what your team actually checks.

Lead acquisition & qualification FAQ: What if a rep does not respond?

https://www.salnethub.com/services/lead-acquisition-qualification

Question about SalnetHub's Lead acquisition & qualification service: What if a rep does not respond?

Answer: We set a time limit. If the lead is not picked up, it moves to the next rep or a manager.

Data reporting & analytics FAQ: Do we need a data warehouse?

https://www.salnethub.com/services/data-reporting-analytics

Question about SalnetHub's Data reporting & analytics service: Do we need a data warehouse?

Answer: Most small-to-medium businesses do not. Google Sheets and Looker Studio handle a lot. We suggest a warehouse only when your data volume needs one.

Data reporting & analytics FAQ: How fresh is the data?

https://www.salnethub.com/services/data-reporting-analytics

Question about SalnetHub's Data reporting & analytics service: How fresh is the data?

Answer: It depends on the source. Most dashboards refresh between every 15 minutes and every hour.

Data reporting & analytics FAQ: Can you match our existing report?

https://www.salnethub.com/services/data-reporting-analytics

Question about SalnetHub's Data reporting & analytics service: Can you match our existing report?

Answer: Yes. We start by rebuilding the report you already use, so you can check our numbers against it.

Data reporting & analytics FAQ: Is our data shared with anyone?

https://www.salnethub.com/services/data-reporting-analytics

Question about SalnetHub's Data reporting & analytics service: Is our data shared with anyone?

Answer: No. Your data stays in your own accounts. We work with the access you grant us and remove it when the project ends if you prefer.

Business process automation FAQ: Which processes are worth automating first?

https://www.salnethub.com/services/business-process-automation

Question about SalnetHub's Business process automation service: Which processes are worth automating first?

Answer: The ones that happen often, follow the same steps each time and involve copying data between tools. We help you rank them on the first call.

Business process automation FAQ: What if our process has exceptions?

https://www.salnethub.com/services/business-process-automation

Question about SalnetHub's Business process automation service: What if our process has exceptions?

Answer: We build the normal path first and route exceptions to a person with all the context attached.

Business process automation FAQ: Do we lose control over decisions?

https://www.salnethub.com/services/business-process-automation

Question about SalnetHub's Business process automation service: Do we lose control over decisions?

Answer: No. Anything that needs judgment stays with a person. The automation prepares the information and waits for their decision.

Business process automation FAQ: Can you work with tools we built in-house?

https://www.salnethub.com/services/business-process-automation

Question about SalnetHub's Business process automation service: Can you work with tools we built in-house?

Answer: Often yes, if they have an API, a database we can read, or even a spreadsheet export.

Task & workflow automation FAQ: How small a task is worth automating?

https://www.salnethub.com/services/task-workflow-automation

Question about SalnetHub's Task & workflow automation service: How small a task is worth automating?

Answer: If it happens daily and follows the same steps, it is usually worth it. A 5-minute task done 10 times a day is 4 hours a week.

Task & workflow automation FAQ: Make, Zapier or n8n?

https://www.salnethub.com/services/task-workflow-automation

Question about SalnetHub's Task & workflow automation service: Make, Zapier or n8n?

Answer: We pick the tool that fits your volume and budget. Zapier is simplest, Make handles complex logic at lower cost, and n8n suits high volumes.

Task & workflow automation FAQ: What if an automation fails?

https://www.salnethub.com/services/task-workflow-automation

Question about SalnetHub's Task & workflow automation service: What if an automation fails?

Answer: You get an alert with the details, and we fix it. Monitoring is included in your monthly fee, so we usually see failures before you do.

Task & workflow automation FAQ: Can we change the automations later?

https://www.salnethub.com/services/task-workflow-automation

Question about SalnetHub's Task & workflow automation service: Can we change the automations later?

Answer: Yes. We document how each one works so your team can make small changes, and we handle the bigger ones.

AI chatbots for websites FAQ: Which AI models do you use?

https://www.salnethub.com/services/ai-chatbots

Question about SalnetHub's AI chatbots for websites service: Which AI models do you use?

Answer: We use leading models from providers such as OpenAI and Anthropic, chosen for accuracy and cost. You can switch providers later.

AI chatbots for websites FAQ: What does it cost to run each month?

https://www.salnethub.com/services/ai-chatbots

Question about SalnetHub's AI chatbots for websites service: What does it cost to run each month?

Answer: Running costs depend on traffic. Most small-to-medium sites spend between $20 and $150 a month on AI usage. We estimate it before we build.

AI chatbots for websites FAQ: Will it give wrong answers?

https://www.salnethub.com/services/ai-chatbots

Question about SalnetHub's AI chatbots for websites service: Will it give wrong answers?

Answer: We limit it to your content and test it heavily. When it is not sure, it hands over to a person instead of guessing.

AI chatbots for websites FAQ: Does it work on any website?

https://www.salnethub.com/services/ai-chatbots

Question about SalnetHub's AI chatbots for websites service: Does it work on any website?

Answer: Yes. It installs with a small code snippet on WordPress, Webflow, Shopify, Wix or a custom site.

Custom AI agents FAQ: How is an agent different from an automation?

https://www.salnethub.com/services/custom-ai-agents

Question about SalnetHub's Custom AI agents service: How is an agent different from an automation?

Answer: An automation follows fixed rules. An agent can read unstructured information, decide what it means and choose the next step, within limits you set.

Custom AI agents FAQ: Can the agent make mistakes?

https://www.salnethub.com/services/custom-ai-agents

Question about SalnetHub's Custom AI agents service: Can the agent make mistakes?

Answer: Yes, which is why we use approval steps, shadow mode and logs. Sensitive actions never happen without a person.

Custom AI agents FAQ: Where does the agent run?

https://www.salnethub.com/services/custom-ai-agents

Question about SalnetHub's Custom AI agents service: Where does the agent run?

Answer: In your own accounts or a private server, using tools like n8n or a small custom app. You own it.

Custom AI agents FAQ: What does it cost to run?

https://www.salnethub.com/services/custom-ai-agents

Question about SalnetHub's Custom AI agents service: What does it cost to run?

Answer: AI usage for most agents costs between $30 and $300 a month, depending on volume. We estimate it during scoping.

RAG knowledge assistants FAQ: What does RAG mean?

https://www.salnethub.com/services/rag-systems

Question about SalnetHub's RAG knowledge assistants service: What does RAG mean?

Answer: Retrieval-augmented generation. The AI first retrieves relevant passages from your documents, then writes an answer based only on them.

RAG knowledge assistants FAQ: Which documents can it use?

https://www.salnethub.com/services/rag-systems

Question about SalnetHub's RAG knowledge assistants service: Which documents can it use?

Answer: Google Docs, Sheets, PDFs, Word files, Notion pages, help centre articles and web pages. Scanned documents can be converted to text first.

RAG knowledge assistants FAQ: Is our data used to train AI models?

https://www.salnethub.com/services/rag-systems

Question about SalnetHub's RAG knowledge assistants service: Is our data used to train AI models?

Answer: No. We use business API terms that exclude your data from model training, and your index is stored in your own account.

RAG knowledge assistants FAQ: How accurate is it?

https://www.salnethub.com/services/rag-systems

Question about SalnetHub's RAG knowledge assistants service: How accurate is it?

Answer: We measure it on your own test questions before launch. Because every answer shows its source, errors are easy to spot and fix.

Web solutions FAQ: Which platform do you build on?

https://www.salnethub.com/services/web-solutions

Question about SalnetHub's Web solutions service: Which platform do you build on?

Answer: Usually Next.js for custom sites, or Webflow and WordPress when your team wants to edit everything themselves. We recommend one on the first call.

Web solutions FAQ: Can you redesign our existing site?

https://www.salnethub.com/services/web-solutions

Question about SalnetHub's Web solutions service: Can you redesign our existing site?

Answer: Yes. We keep what works, especially pages that already rank in search, and rebuild the rest.

Web solutions FAQ: Do you write the copy?

https://www.salnethub.com/services/web-solutions

Question about SalnetHub's Web solutions service: Do you write the copy?

Answer: We structure every page and write the copy with you, based on how your customers describe their problems.

Web solutions FAQ: Who hosts the website?

https://www.salnethub.com/services/web-solutions

Question about SalnetHub's Web solutions service: Who hosts the website?

Answer: Your site is hosted in your own account, so you always own it. We can also manage it for you as part of a monthly plan.

Pricing FAQ: Why don't you publish a fixed price list?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: Why don't you publish a fixed price list?

Answer: Because a fixed price ignores what the work is worth to you. A booked appointment is worth more to a dental clinic than to a café. We price from your numbers, so the deal always makes sense for you.

Pricing FAQ: What counts as a result?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: What counts as a result?

Answer: We agree it in writing before we start, for example a confirmed appointment in your calendar or a lead that meets your criteria. Spam, duplicates and bookings that fall through because of us are not charged.

Pricing FAQ: Do I pay anything up front?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: Do I pay anything up front?

Answer: Not for pay-per-result services: the pilot is free. Automation pilots are $250, refunded in full if the pilot misses its agreed target. Third-party tools such as your CRM, Zapier or AI usage are paid directly to those providers, and we estimate them for you first.

Pricing FAQ: What if the pilot doesn't work?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: What if the pilot doesn't work?

Answer: Then you walk away and owe nothing for the build. We would rather lose a pilot than keep a client who is not getting value.

Pricing FAQ: How do you bill?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: How do you bill?

Answer: Monthly. Pay-per-result services are billed from the results log you can see; automation fees are one fixed monthly amount. No surprises.

Pricing FAQ: Can we still get a fixed quote?

https://www.salnethub.com/engagements

Question about SalnetHub pricing: Can we still get a fixed quote?

Answer: Yes. For large one-off builds, such as a knowledge assistant or a company-wide system, we can give you a fixed written quote after the pilot if you prefer.

FAQ: How much of our team's time will this take?

https://www.salnethub.com/how-we-work

Question about working with SalnetHub: How much of our team's time will this take?

Answer: About 2 hours in the first week for discovery, then 30 minutes a week for feedback. Testing needs one or two people for a few hours.

FAQ: What access do you need?

https://www.salnethub.com/how-we-work

Question about working with SalnetHub: What access do you need?

Answer: Only what the workflow touches, granted through your own admin settings. We use separate logins where possible and remove access when you ask.

FAQ: Do you sign NDAs?

https://www.salnethub.com/how-we-work

Question about working with SalnetHub: Do you sign NDAs?

Answer: Yes. We are happy to sign your NDA or provide ours before discovery.

FAQ: What if our requirements change mid-project?

https://www.salnethub.com/how-we-work

Question about working with SalnetHub: What if our requirements change mid-project?

Answer: Small changes are absorbed. Larger ones are written up with their cost and timeline, and you decide before we do the work.

FAQ: What kind of businesses do you work with?

https://www.salnethub.com/

Question about working with SalnetHub: What kind of businesses do you work with?

Answer: Small-to-medium teams and businesses, usually 5 to 200 people, in services, e-commerce, property, logistics and professional firms. If your team copies data between tools, we can probably help.

FAQ: Do we need to change the tools we use?

https://www.salnethub.com/

Question about working with SalnetHub: Do we need to change the tools we use?

Answer: No. We build on what you already run, such as Google Workspace, HubSpot or your accounting software, and add a connector like Make, Zapier or n8n only where needed.

FAQ: How quickly will we see results?

https://www.salnethub.com/

Question about working with SalnetHub: How quickly will we see results?

Answer: A single workflow is usually live within 1 to 2 weeks. Larger systems go live in stages, so you get value before the whole project is finished.

FAQ: What happens if an automation breaks?

https://www.salnethub.com/

Question about working with SalnetHub: What happens if an automation breaks?

Answer: You get an alert, and we fix it. Monitoring is included in your monthly fee, so we usually spot problems before you do. When it is our mistake, we say so and fix it at no cost.

Pricing

SalnetHub pricing: you pay for results, not promises

https://www.salnethub.com/engagements

You pay for results, not promises. Most agencies ask for thousands up front and hope it works. We do it the other way round: we work out what the problem costs you today, prove we can fix it in a 14-day pilot, and price our work below what you are already losing.

SalnetHub does not use a fixed price list. Every price is worked out from the client's own numbers, and is always below what the problem costs them today. All prices are in US dollars.

How pricing works:

1. We find the leak and put a number on it. On a free 20-minute call we ask a few simple questions: where your customers come from, how many slip away, and what each one is worth. Together we work out what the problem costs you every month. You confirm every number.
2. We prove it in a 14-day pilot. We fix one problem first, small and fast. You see the results in your own calendar, inbox or reports before you commit to anything bigger.
3. You pay based on what it brings you. Once it works, our price follows the result: per booked appointment, or a small share of the time we save you. Always less than the problem was costing you.

Third-party subscriptions and AI usage are paid directly to the providers, at cost. SalnetHub estimates them up front. For large one-off builds a fixed written quote is available after the pilot, if the client prefers.

SalnetHub's two ways to charge: pay per result, or pay from what you save

https://www.salnethub.com/engagements

SalnetHub charges in one of two ways, depending on the result the work brings:

Pay per result (Pay per booked appointment). Used for: Lead replies, chatbots, WhatsApp and SMS agents, call answering and old-lead reactivation. You pay for each booked appointment or qualified lead we deliver. No setup fee and nothing up front. If it does not book, you do not pay. How the price is set: We take what one lead costs you and how many of your leads actually book. That shows what a booked appointment really costs you today. We charge less than that. Includes: No setup fee; Free 14-day pilot; Every booking logged where you can see it.

Pay from what you save (Never more than 25% of the savings). Used for: Workflow automation, CRM, reporting and back-office processes. We measure how many hours a task takes your team each month and what those hours cost. Your monthly fee is never more than 25% of the cost we remove, so you keep at least 75%. How the price is set: The pilot is $250, refunded in full if it misses the target we agree at the start. After that you pay one monthly fee, with monitoring and fixes included. Includes: $250 pilot, refundable; Fee capped at 25% of savings; Monitoring and fixes included.

Pilots: every engagement starts with a 14-day pilot. Pay-per-result pilots are free. Automation pilots cost $250, refunded in full if the pilot misses the target agreed at the start. If the pilot does not deliver, the client owes nothing for the build.

Pricing examples: what a booked appointment and manual work really cost

https://www.salnethub.com/engagements

These are illustrations of how SalnetHub calculates a price. Real prices are set from the client's own numbers on the free call.

Booked appointments: a business pays $40 per lead and 1 in 4 leads books. $40 ÷ 0.25 = $160: that is what one booked appointment really costs them. SalnetHub would charge about $90 per booked appointment, and only when it books.

Manual work: 3 people × 6 hours a week × 4 weeks × $25 an hour = $1,800 a month. SalnetHub's monthly fee would be at most 25% of that saving, $450, so the client keeps the rest.

SalnetHub's pricing promises and how clients grow

https://www.salnethub.com/engagements

SalnetHub's pricing promises:

- No big payment before results: Every engagement starts with a short pilot on one problem.
- Your numbers, not ours: Prices come from figures you confirm on the call.
- You see every result: Each booking, lead or saved hour is logged in a sheet or dashboard you can open any time.
- If it fails, you owe nothing: If the pilot does not deliver, you walk away and owe nothing for the build.
- Leave any time: Monthly billing with 30 days' notice. No long contracts.

Start small, grow with results:

1. One problem: We start with your biggest leak, such as missed calls, slow lead replies or one manual process.
2. Results speak: You see appointments landing and hours coming back. That is usually when clients ask what else it can do.
3. Grow when it pays: We add the next system: CRM, reporting, AI assistants. Each one is priced the same way.

The SalnetHub cost calculator: manual work and lead bookings

https://www.salnethub.com/

The SalnetHub home page has a calculator with two tabs.

Manual work: what copy-paste work costs per year: people × hours per week each × 48 working weeks × hourly rate. It assumes, conservatively, that automation removes half of that time, and shows SalnetHub's fee at most 25% of the saving.

Leads and bookings: what one lead costs ÷ the share of leads that book = what one booked appointment really costs. With SalnetHub the client pays less than that per booking, only when it books, with $0 up front. Default example: $40 per lead and 25% booking = $160 per booked appointment.

Example with the default numbers: 3 people × 6 hours a week × 48 weeks × $25 an hour = $21,600 a year, of which about half could be saved.

Typical outcomes from single-workflow projects:

- Replying to a new lead: before, the next working day; after, under 2 minutes, day or night.
- The weekly sales report: before, half of every monday; after, in your inbox at 8 am.
- Order details from email: before, copied by hand, 40 a day; after, added to the sheet as they arrive.

- Onboarding a new client: before, 2 hours across 5 tools; after, one trigger, under 5 minutes.

Process

How SalnetHub projects work: five steps

https://www.salnethub.com/how-we-work

SalnetHub follows a clear process with results-based pricing, weekly updates and nothing installed on your side. Five steps, from first call to a system that keeps running. Each step ends with something concrete you can see, check and keep.

1. Discover: We learn how the work happens today. A 20-minute call, then a closer look at your tools and the people who use them. We find where time is lost and agree on the first workflow worth automating. Output: A clear target and a 14-day pilot plan.
2. Build: We build in a safe copy of your setup. Automations are built and tested away from live data. You see progress every week, in plain language, with nothing to install. Output: Working automations in a test setup.
3. Test: We run real examples end to end. Your team pushes real cases through every path, including the odd ones. We fix every issue before anything touches live data. Output: A signed-off test checklist.
4. Hand over: We launch and teach your team. We switch on in stages, watch the first days closely, and leave a written guide plus a recorded walkthrough. Output: Documentation your team can use.
5. Support: We keep it running. Tools change their APIs and processes evolve. Your monthly fee includes monitoring and fixes, and we add new builds when they pay for themselves. Output: Monthly health report.

What you can count on with SalnetHub

https://www.salnethub.com/how-we-work

What you can count on when you work with SalnetHub:

- Pay for results: We prove it in a 14-day pilot first, then charge per booking or a capped share of the time we save. No hourly surprises.
- Weekly updates in plain words: Every week you hear what was built, what is next and anything we need from you.
- Built in a safe copy first: We build and test away from live data, so your daily work is never interrupted.
- You own everything: Automations live in your accounts. If we part ways, everything keeps running.
- Documentation included: Every build ships with a written guide and a recorded walkthrough.
- 30 days of aftercare: We monitor and fix every new build for 30 days after launch at no extra cost.

Our promises:

- Pay for results: Per booked appointment, or a capped share of the time we save you.
- If it fails, you owe nothing: Every engagement starts with a pilot. No result, no bill for the build.
- Live in weeks: Your first workflow is usually live in 1 to 2 weeks.
- Documented and handed over: A written guide and recorded walkthrough for every build.

A typical project week. No long meetings. Short written updates you can read in two minutes, and a demo whenever there is something to see.

- Monday: Short written update: progress, blockers, decisions needed.

- Mid-week: Demo link or recording of what is working so far.
- Friday: Plan for next week and any access or data we need.

Integrations

Tools SalnetHub connects

https://www.salnethub.com/integrations

SalnetHub connects 36+ tools your team already uses. We build on what you already run and add a connector like Make, Zapier or n8n only where needed. If a tool has an API, we can usually connect it.

Google Workspace: Google Sheets, Gmail, Google Drive, Google Calendar, Google Forms, Apps Script.

CRM & sales: HubSpot, Zoho, Typeform, Calendly, Mailchimp, Meta lead ads, WhatsApp.

Automation platforms: Make, Zapier, n8n.

AI & data: OpenAI, Anthropic, LangChain, Supabase, Looker Studio, Google Analytics.

Operations & finance: QuickBooks, Xero, Notion, ClickUp, Asana, Trello, Airtable, Intercom.

Web & commerce: Shopify, Stripe, WordPress, Webflow, Next.js, Vercel.

SalnetHub integrations: Google Workspace

https://www.salnethub.com/integrations

What SalnetHub does with Google Workspace tools:

- Google Sheets: Lightweight CRMs, trackers, data pipelines and dashboards.
- Gmail: Inbox parsing, follow-up sequences and AI email triage.
- Google Drive: Automatic filing, document generation and RAG libraries.
- Google Calendar: Booking flows, reminders and scheduling automations.
- Google Forms: Intake forms that create records and tasks on submit.
- Apps Script: Custom tools, menus and logic inside Google Workspace.

SalnetHub integrations: CRM & sales

https://www.salnethub.com/integrations

What SalnetHub does with CRM & sales tools:

- HubSpot: Contact sync, deal automation, sequences and reporting.
- Zoho: CRM workflows, lead routing and Zoho app integrations.
- Typeform: Lead capture with scoring and instant routing.
- Calendly: Booked meetings that update the CRM and notify the owner.
- Mailchimp: Audience sync, tagging and campaign triggers.
- Meta lead ads: Lead ads delivered to your CRM and reps in seconds.
- WhatsApp: Rep alerts, customer updates and chatbot handoff.

https://www.salnethub.com/integrations

What SalnetHub does with Web & commerce tools:

- Shopify: Order, inventory and customer automations.
- Stripe: Payment events that trigger fulfilment and reporting.
- WordPress: Sites with connected forms and chatbots.
- Webflow: Marketing sites with CRM-connected forms.
- Next.js: Fast custom websites and web apps.
- Vercel: Hosting for fast, modern websites.

Policies

SalnetHub privacy in brief

https://www.salnethub.com/privacy

SalnetHub's privacy policy in brief (full policy: https://www.salnethub.com/privacy):

- We collect what you send us through the contact form, the booking calendar or email, such as your name, email, company and message, and use it to reply and prepare for your call.
- Analytics cookies and the record of pages you visit on the site are only used if you accept them in the cookie banner. You can change your choice any time with "Cookie settings" in the site footer. We honour Global Privacy Control.
- We do not sell personal data and do not run ads.
- Our providers include Vercel (hosting), Google (Workspace, Calendar, Sheets and Analytics) and our email provider.
- For client projects, your data stays in your own accounts and we use AI providers on business terms that exclude your data from model training.
- To access, correct or delete your data, email info@salnethub.com.

SalnetHub terms of use in brief

https://www.salnethub.com/terms

SalnetHub's terms of use in brief (full terms: https://www.salnethub.com/terms):

- Client work is governed by its own written proposal, statement of work or services agreement, or by the contract terms of the marketplace where you hired us, such as Upwork. If those conflict with the site terms, the project agreement wins.
- Quotes are fixed and in writing before work starts.
- The site terms are governed by the laws of Uganda. Consumers keep any rights their home law gives them.
- Questions about the terms: info@salnethub.com.
